

SnapServer™ XSR120 eXpand and Sync Rack-mount Series

Enterprise class management and data protection features, all in a 2U rack-mount form factor

SnapServer XSR120 is targeted at SMBs and large Enterprises with significant data growth. Built upon the award winning GuardianOS®, the SnapServer XSR120 offers enterprise class management and data protection features, all in a 2U rack-mount form factor. Ideal for file sharing, backup and remote access the SnapServer XSR120 supports SATA-III, SAS 3.0 hard drives and SSDs and is scalable up to 960TB.

With block and file level access, the SnapServer XSR120 lets your storage grow seamlessly as capacity needs change and protect your data. SnapServer GuardianOS includes DynamicRAID for seamless storage expansion by adding or replacing hard drives as capacity requirements change.

In addition, all SnapServer storage volumes can grow or shrink dynamically within the storage pool without IT intervention, preventing costly provisioning errors and unnecessary upgrades. GuardianOS includes additional data protection features such as high performance snapshots, continuous encrypted replication (Snap ECR™), heterogeneous replication with cross-platform compatibility with Windows, Linux, UNIX and Macintosh systems (Snap EDR™), and direct backup to RDX. You can have Enterprise file sync and share with unlimited access to content residing on corporate infrastructure from any device and from anywhere (SnapSync™).

With this product you can:

- ✓ Protect and store data with DynamicRAID, offering simple expansion and volume management
- ✓ Protect and recover your data with high performance snapshots and continuous replication
- ✓ Replicate data between a central location and one or more remote locations
- ✓ Share and access data anywhere across Windows, UNIX/Linux, Macintosh, iOS and Android platforms
- ✓ Unlimited access to content residing on corporate infrastructure from any device and from anywhere
- ✓ Backup to RDX media, disk, or LTO tape
- ✓ Replication with Snap EDR

Features

- Unified Storage
- DynamicRAID
- Dynamic Volumes
- Advanced Security
- Management
- SnapSync
- Continuous Encrypted Replication
- Replication across Heterogeneous platforms
- RDX Integration
- Backup Support
