

Overland-Tandberg broadens Storage Portfolio and adds Server Solutions

San Ramon, CA (US), 8/19/2022

Overland-Tandberg, a global provider of data protection and storage solutions, today announced a comprehensive expansion of the product portfolio.

“Addressing the ever-increasing demand for storage in today’s IT environments, driven by explosive data growth from various applications, the Internet of Things (IoE) and Big Data, we added server and storage solutions to our product offerings from SMB to Enterprise customers”, explains Eric Kelly, CEO and Chairman at Overland-Tandberg.

The “Olympus” Server line consists of tower and rack configurations for businesses that require value, flexibility, and a range of performance needs. The rackmount dual socket servers R700 and R800 offer a mix of features to maximize performance, scale to meet future demands, and adapt to virtually any workload. The proprietary RDX® QuikStor® System backup and business continuity options are available for the tower server T400 and T600 models.

Primary and Secondary Storage solutions under the “Titan” brand offer scalable, intelligent, and cloud integrated products to accelerate critical workloads from core to edge to cloud. The Titan T2000 series offers SAN & DAS solutions optimized to the small to medium-sized businesses demand. Data Protection products for backup and recovery purposes are offered with the Titan T3000 series. Unified Storage flash arrays (T5000) and scale-out NAS solutions (T6000) round out the Titan portfolio.

“We really appreciate our long-term business partner Overland Tandberg expanding their product range. This enables us to take part in more complex projects with high quality products in the future”, says Sven Meyerhofer, Managing Director at N-TEC GmbH, Germany.

All “Olympus” and “Titan” solutions can be flexibly customized to meet the different challenges of storing, managing, protecting, and unlocking value in every kind of data. The new server and storage products are “powered by Dell” with the full breadth of proven technologies, including server, storage, and data protection options complemented with different Pro-Support options to meet customers’ SLA requirements.

“Great to see our partner Overland Tandberg adding those exiting products to the portfolio. With those we will be able to follow more in depth projects about business continuity and data center expansions from now on” states Yatin Kantak, COO at Softcell Technologies Global Pvt Ltd, India.

“Our goal is to provide a different way of thinking about data storage that is consistent with today’s fast-paced environment. Working strategically with our partners gives us the worldwide scale to deliver reliable data security combined with performance that is affordable”, adds Natalie Kremer, BDM Storage EMEA at Overland Tandberg. “We remain focused on providing exceptional products and services to many of the world’s most recognized businesses in over 100 countries for over the last 42 years.”
